

Complete Mixing Solutions

Sepak Industries is a solution provider for mixing problems with a range of high quality mixing systems to suit every occasion from milk powder to water mixing to guar gum mixing or sugar dissolving in cold water.

Sepak Industries Pty Ltd design and manufacture 2 main groups of mixing systems namely; (1) In line mixing system or (2) In tank mixing systems.

IN LINE MIXING SYSTEMS

The Sepak Industries inline mixing systems are designed to mix difficult to mix powder into liquid or for reconstituting products for reuse. These systems are very efficient with often mixing is carried out in single pass depending on the degree of difficulties of the Powder being mixed in to certain liquid. These systems can be set up either in-line mixing or with a Batch Tank.

Speed is the major advantage of these systems with up to 9000kg/hr of powder can be mixed into liquid.

These systems can also be used for emulsifying of products or homogenising of products to a degree.

Single stage powder mixer

High Shear Powder Mixing System

High Shear Mixing Pump

Optional Stainless steel Dust Extraction Hood.

Inline Emulsifier.

Achieving Goals through Technical Superiority

Complete Mixing Solutions

IN TANK MIXING SYSTEMS

The Sepak Industries In Tank mixing systems are designed to mix high volume processing in a large batch or used for cooking or cooling of products. There are a number of mixing systems available depending on the products to be mixed;
